

SMART INDIA HACKATHON 2026

- **Problem Statement ID** – SIH26154
- **Problem Statement Title**- Sankshep.ai - Gen AI Platform
for Automated Content Transformation
- **Theme**- Blockchain & Cybersecurity
- **PS Category**- Software
- **Team ID** - 132743
- **Team Name** - NeuralNinjasVgec

Existing Challenges in Content Transformation

Innovation

- ☐ If content is *non-sensitive* :-
→ User can use **API-based LLM section**.
- ☐ If content is *sensitive/confidential* :-
→ User can use **Local LLM section**.

Problems

- Time Loss:-**
Manual content transformation *consumes valuable working hours*.
- Repetitive Effort:-**
The same information is *repeatedly rewritten* for different outputs.
- High Operational Cost:-**
Skilled experts *spend resources on routine* content-processing tasks.
- Content Inconsistency:-**
Different teams create *different versions from the same source*.
- Decision Delay:-**
Important information *takes longer time* to reach decision-makers.

How Sankshep.ai Works

Outputs

- ☐ Video Script
- ☐ LinkedIn Post
- ☐ Blog Post
- ☐ X/Twitter Post
- ☐ Advisory
- ☐ Executive-Summary
- ☐ Slide Deck
- ☐ Simplified-Explanation
- ☐ Language-Translation
- ☐ Infographic

Solutions

- Multi-Format:-**
Creates *different content formats* from one source.
- AI Configuration:-**
Configure *target audience, tone, language, content length, and output format*.
- Source-Grounded AI:-**
Keeps *AI-generated outputs connected* to the original source content.
- Human Review:-**
Review, edit and regenerate before approval.
- Multi-Output Export:-**
Create *multiple outputs and download them* in different formats.

Uniqueness

Custom AI Control

Guide the *AI with custom instructions* and refine individual outputs as needed.

User-Selected LLM

User can *select the AI provider and model* for each generation task.

Multi-Model Comparison

Generate and *compare outputs from up to three AI models* on the same source.

Transformation Tracking

Track previous transformations and *get insights into formats, outputs, and usage*.

Admin Control & Monitoring

Monitor *users, generations, sign-ins, and system activity* with admin controls.

TECHNICAL APPROACH

INPUTS

Documents

- ☐ PDF
- ☐ DOCX
- ☐ TXT · CSV · MD
- ☐ JSON

Scanned PDF & Images

Web Link

Cloud mode only

Pasted Text

Audience Profile

preset or saved

Processing Mode

Cloud or Private

STEP 1

**Sign in**

Supabase Auth

STEP 2

Processing Mode

☐ Cloud APIs ☐ Private

Private: checks Ollama + hardware, shows a setup guide

STEP 3

Configure Run

Source: upload · link · paste
Formats + instructions · tone · audience
Cloud: 1 model or compare up to 3
+ own API key (optional)

STEP 4

Plan the Run

Smart check against the canvas:
• only new formats are sent
• or the user regenerates all

STEP 7

Clean Up Text

local tidy-up, no AI call
so nothing gets cut off

STEP 6

Links & Images → Text

- Link → page text via Jina Reader (Cloud only)
- Image → vision AI (Gemini, Mistral)
- If it fails → on-device OCR (Tesseract.js)
- Private mode: always OCR, images stay local

STEP 5

Read Your File (in browser)

- PDF → text (pdf.js legacy build)
- DOCX → text (mammoth)
- TXT / CSV / JSON / MD → read directly
- Scanned PDF → 10 page images, ≤2000px

STEP 8

Fit to Each AI

Groq 12k · Mistral 60k · Gemini 200k · on-device 6k chars
long docs sampled evenly

STEP 9a

Write the Drafts

one node per format × model
Cloud: in parallel · 2 × 3 = 6 drafts
Private: one at a time, streamed

STEP 9b

Translate (if asked)

whole text in small chunks
cut-off chunk → halved, redone

STEP 11b

Refine a Draft

type a change; AI picks
draft-only or full source

STEP 10 · Model Gateway

- ☒ Own key → straight to the provider
- ☐ No key → our server's shared keys
- ☐ Private → Ollama on your computer
- Busy → retries · key fails → asks first

AI INFERENCE

Cloud · fast

Groq Gemini Mistral

On-device · private

Ollama · qwen2.5vl:7b

STEP 11a

Output Canvas

live, side by side
compare · export · Stop

STEP 12 – 13

Supabase

12 · Log the run
Private: counts only
13 · History
analytics & admin

PPT Presentation

Here's a polished, professional slide deck structure for your presentation on "Attention Is All You Need: Introducing the Transformer Model." Designed for clarity, engagement, and technical depth, this structure ensures a cohesive narrative flow.

Slide 1: Title Slide

Attention Is All You Need

Introducing the Transformer Model

Google Brain Research

Authors: Ashish Vaswani *et al.*

Speaker notes

Welcome everyone! Today, we'll explore the Transformer model, a groundbreaking architecture that revolutionized sequence transduction tasks like machine translation. Developed by Google Brain, this model

Refine this Slide Deck: "shorter", "add a risk table"...

this draft only Refine

Multi-model Engine

Each model drafts every selected format. Results appear side by side.

Output Customization Instruction to AI

Supported Operating Systems :

FEASIBILITY AND VIABILITY

FEASIBILITY

Technically:

Existing AI models, OCR, document-processing tools, and modular orchestration frameworks make multi-format content transformation technically implementable.

Economically:

Costs can be controlled through caching, model selection, usage limits and hybrid AI infrastructure.

Operationally:

A simple upload-to-output workflow with human review makes the platform practical for users.

Working Protocol:

The platform supports authentication, multi-format input processing, AI transformation, and multi-format output generation across devices.

VIABILITY

Target Audience:

The platform can serve students, enterprises, content creators and educational institutions and by converting one source into multiple useful formats while maintaining context and providing provenance.

User Adoption:

A simple and cross-device workflow makes AI-powered content transformation accessible and practical for a wide range of users.

Competitive Advantage:

A single platform for multi-format content transformation reduces the need for multiple tools and simplifies the overall content creation process.

CHALLENGES & SOLUTIONS

API Rate Limits

- **Challenge:** Limited API quotas/throughput interrupt AI generation.
- **Solution:** Optimize tokens, use request queuing, and add backup AI providers.

Video Input Support

- **Challenge:** No direct video upload/processing in the current prototype.
- **Solution:** Add video-to-text transcription, keyframe extraction, and scene analysis.

Scalability & High Workloads

- **Challenge:** Large files and many users can increase processing time.
- **Solution:** Background task queues and cloud auto-scaling for smooth performance.

IMPACT AND BENEFITS

RESEARCH AND REFERENCES

IMPACT:

- ❑ Enables faster processing of information into required formats.

- ❑ Automates repetitive reading, rewrites and reformatting. 

-  ❑ Preserves core information across formats and audiences.

- ❑ Makes complex information simpler and easier to consume. 

- ❑ Converts existing information into multiple useful deliverables.

BENEFITS:

- ❑ Generates summaries, posts, advisories, presentations, scripts and other outputs from one source.

- ❑ Lets users set the audience, tone, language and style. 

- ❑ Compares outputs from different AI models for the same source.

- ❑ Supports refinement, history, analytics and activity tracking. 

- ❑ Lets users choose the AI model for each task.
